PI_Web Install Procedure for Windows Vista and Windows 7

There are two different manners to install PI_WEB

- 1. Using the PIWebInstaller (preferred)
- 2. Downloading the application files or binaries (if download does not succeed)

1. Using the PIWebInstaller

Open your web browser and go to http://piweb.publi-info.com/v2.x/setup/piwebinstaller.exe

A box will open, asking you to save or run the application.

When choosing to run the application, after the download has completed, a security warning box will pop up telling you PIWebInstaller is not commonly downloaded. You can click 'Actions' to view all actions available for this downloaded file.

You should open the 'More Options' box to select the 'Run anyway' option.

When you choose to run the application, the installation wizard for PI_Web will start.

Click 'Next' to install the PI_Web application.

The installation wizard will not require any further user input. Exceptionally, the wizard will warn you that PI_Web is still running on your computer (see troubleshooting).

After the wizard has successfully installed PI_Web, the PI_Web application will start automatically. You can log in with the credentials provided by HighCo Publi Info.

2. Using the PI_Web application files (Binaries)

Open your web browser and go to '<u>http://piweb.publi-info.com/v2.x/setup/piwebbinaries.zip</u>'. A box will open, asking you to save or open the file.

Click 'Save'.

After the download has completed, go to the folder you've downloaded the file in. Extract the contents from the file to a common destination (i.e. 'My Documents/PI_Web/').

Optionally, you can choose to add an application shortcut to your desktop for easy access.
